QUESTION ONE

WHAT IS THE DEFAULT FILE FORMAT WHEN CREATING A NEW GOOGLE DOC?

A. .docx
B. .pdf
C. Google Docs document
D. .txt

WHAT IS THE DEFAULT FILE FORMAT WHEN CREATING A NEW GOOGLE DOC?

A. .docx
B. .pdf
C. Google Docs document
D. .txt

Answer: C

QUESTION TWO

WHICH SHORTCUT IS USED TO MAKE TEXT BOLD IN GOOGLE DOCS?

A. CTRL + B
B. CTRL + I
C. CTRL + U
D. CTRL + S

WHICH SHORTCUT IS USED TO MAKE TEXT BOLD IN GOOGLE DOCS?

A. CTRL + B
B. CTRL + I
C. CTRL + U
D. CTRL + S

ANSWER: A

QUESTION THREE

WHAT FEATURE ALLOWS YOU TO SEE CHANGES MADE TO A GOOGLE DOC OVER TIME?

A. WORD COUNT
B. VERSION HISTORY
C. DOCUMENT OUTLINE
D. PAGE SETUP

WHAT FEATURE ALLOWS YOU TO SEE CHANGES MADE TO A GOOGLE DOC OVER TIME?

A. WORD COUNT
B. VERSION HISTORY
C. DOCUMENT OUTLINE
D. PAGE SETUP

ANSWER: B

QUESTION FOUR

WHICH OPTION ALLOWS YOU TO SUGGEST EDITS WITHOUT DIRECTLY CHANGING THE ORIGINAL TEXT?

A. EDITING
B. VIEWING
C. SUGGESTING
D. REVIEWING

WHICH OPTION ALLOWS YOU TO SUGGEST EDITS WITHOUT DIRECTLY CHANGING THE ORIGINAL TEXT?

A. EDITING
B. VIEWING
C. SUGGESTING
D. REVIEWING

ANSWER: C

QUESTION FIVE

WHAT HAPPENS WHEN YOU SHARE A GOOGLE DOC WITH SOMEONE AS AN “EDITOR”?

A. THEY CAN ONLY VIEW THE DOCUMENT
B. THEY CAN COMMENT BUT CANNOT EDIT
C. THEY CAN EDIT THE DOCUMENT
D. THEY CAN ONLY DOWNLOAD THE DOCUMENT

WHAT HAPPENS WHEN YOU SHARE A GOOGLE DOC WITH SOMEONE AS AN “EDITOR”?

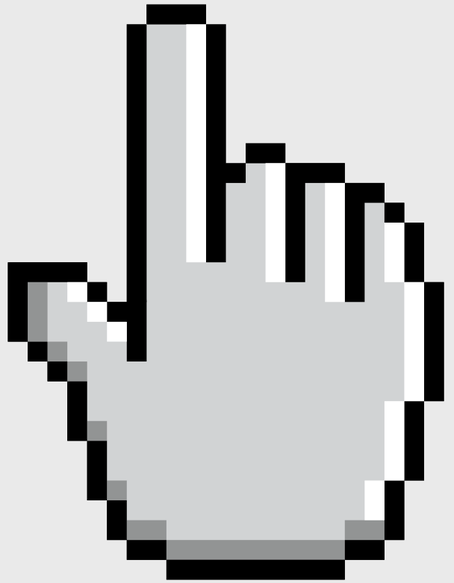

A. THEY CAN ONLY VIEW THE DOCUMENT
B. THEY CAN COMMENT BUT CANNOT EDIT
C. THEY CAN EDIT THE DOCUMENT
D. THEY CAN ONLY DOWNLOAD THE DOCUMENT

ANSWER: C

MIDTERM GROUP REPORTING | GE 4120

GOOGLE DOCS

ARCEGA | CENIA | DABLO | DELGADO | ESCARIO | ESTANISLAO | GRANTOS | FUENTES | TOMAS

GROUP 5

GROUP 5

WHAT IS GOOGLE DOCS?

A cloud-based online word processor.

Used for creating, editing, formatting, organizing, collaborating on, reviewing, and sharing documents. It is part of the Google Workspace ecosystem and is available through the web as well as Android and iOS applications. Unlike a traditional word-processing workflow in which one person creates a file locally and sends copies to other people, Google Docs is designed around cloud-based access and collaboration.

GROUP 5

WHY GOOGLE DOCS MATTERS IN 21ST CENTURY IT SKILLS

Modern digital work is not only "typing a document." It is managing information and people around a document.

CREATE
Turn ideas into a document

↓

ORGANIZE
Structure information

→

COLLABORATIVE
Work with others

↓

REVIEW
Comment, suggest, revise

→

MANAGE
Track versions & access

↓

SHARE
Distribute the final output

The skill is the workflow, not the button.

Example: A five-person research group can stay in one shared document instead of repeatedly emailing different file versions.

GROUP 5

GOOGLE DOCS INSIDE GOOGLE WORKSPACE

Docs is one part of a larger ecosystem of connected productivity tools.

Example workflow: Calendar / meeting → Docs notes → Drive storage → shared review → final PDF

DRIVE

DOCS

SHEETS

SLIDES

FORMS

GROUP 5

THE PURPOSES OF GOOGLE DOCS

The purposes of Google Docs can be organized into six major categories:

1.) CREATE

2.) EDIT

3.) FORMAT

4.) COLLABORATE

5.) REVIEW

6.) DISTRIBUTE

GROUP 5

THE PURPOSES OF GOOGLE DOCS

Important distinction:

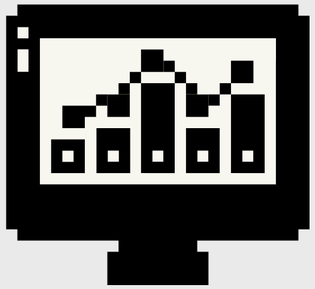

A ***feature*** is what Google Docs provides.
A ***function*** is what the user can accomplish with that feature.

FEATURE: Version history

FUNCTION: Allows users to review previous versions and restore an earlier version when appropriate.

GROUP 5

CREATING AND ORGANIZING DOCUMENTS

DOCUMENT CREATION AND TEMPLATES

Google Docs allows a user to create a blank document or start from a template. A new blank document can also be created through: *docs.google.com* → Blank document or directly through: *docs.new*

FILE NAMING

A newly created document can be renamed simply by clicking the document name at the top and entering a new name.

WHY NAMING MATTERS

A proper filename makes documents easier to locate and manage. Poor naming: Untitled document | Better naming: GE4120_Group3_GoogleDocs_Report | Even better when dates or versions matter: GE4120_Group3_Report_Final_2026

GROUP 5

EDIT AND FORMAT CONTENT

TEXT
font • size • bold • italic • underline

LISTS
bullets • numbering • checklists

PARAGRAPH
alignment • spacing • indentation

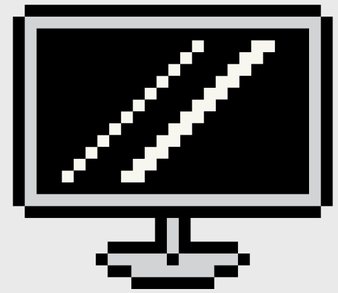

LAYOUT
margins • orientation • page settings

GROUP 5

STYLES, HEADINGS, AND DOCUMENT STRUCTURE

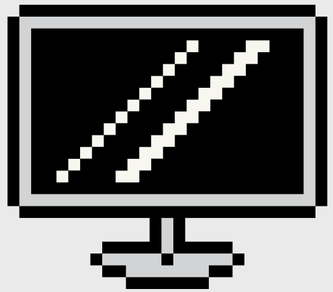

This is where formatting becomes information structure.

Proper headings → outline → table of contents → easier navigation

GROUP 5

DOCUMENT OUTLINE

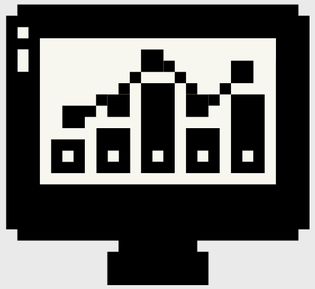

The document outline displays the headings in a document and allows the user to navigate through the document more easily. Google Docs automatically detects headings for the outline.

- RESEARCH PAPERS
- LONG REPORTS
- MANUALS
- STUDY MATERIALS

GROUP 5

TABLE OF CONTENTS

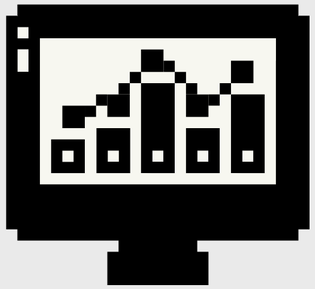

Google Docs can automatically generate a table of contents from the document's title and heading structure. Each entry links to the corresponding section of the document.

WHY THIS MATTERS

- Improves navigation
- Makes long documents easier to use
- Creates professional organization
- Reduces manual updating
- Connects document structure to navigation

GROUP 5

PAGES FORMAT VS. PAGELESS FORMAT

PAGES

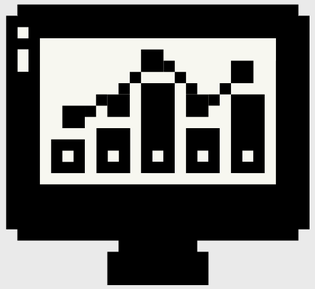

The document behaves more like a traditional printed document. You can use, Page breaks, Headers, Footers, Page numbers, Margins, Paper size or Page orientation

PAGELESS

The document becomes a continuously scrolling workspace rather than a traditional series of pages. Images can adjust to screen size, wide tables can extend horizontally, and text adjusts to the available screen width.

GROUP 5

WHEN SHOULD EACH BE USED?

PAGES: research papers, formal reports, assignments, documents intended for printing.

PAGELESS: collaborative notes, brainstorming, online planning, documents primarily intended for screen viewing.

An important limitation is that several print-oriented features, including headers, footers, page numbers, and certain page settings, are unavailable in pageless format.

GROUP 5

INSERTING INFORMATION BEYOND PLAIN TEXT

Google Docs is not limited to paragraphs.

Users can insert:

- Images
- Tables
- Charts
- Drawings
- Links
- Bookmarks
- Footnotes
- Headers and footers
- Page numbers
- Lists
- Other Google Workspace-related content

GROUP 5

TABLES

Tables allow information to be organized into rows and columns.

FOR EXAMPLE

GROUP MEMBERS	ASSIGNED TASK	DEADLINE	STATUS
Member 1	Introduction	Sept. 28	Done
Member 2	Features	Sept. 29	Ongoing
Member 3	Demonstration	Sept. 30	Not started

Google Docs supports adding and editing tables, and on computers users can also sort rows, move rows/columns, repeat header rows, and manage how table content flows across pages.

Practical Uses

Tables are useful for:

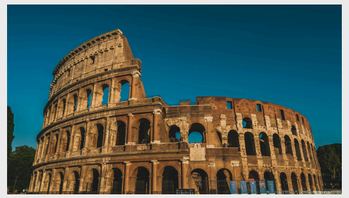

- Schedules
- Comparisons
- Project plans
- Meeting minutes
- Class activities
- Data summaries
- Checklists
- Organizational information

GROUP 5

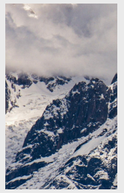

IMAGES AND VISUAL CONTENT

Images can be inserted into a Google Doc from several sources, including:

Computer - Stock/web sources - Google Drive Google Photos - Camera - URL

GROUP 5

PRACTICAL APPLICATIONS

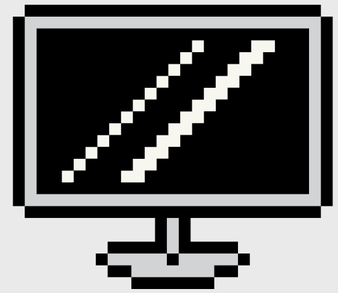

Google's current documentation also supports adding cover images in pageless documents.

Images can be used in:

- Instructional manuals
- Research reports
- Posters
- Project documentation
- Tutorials
- Educational materials

The important principle is:

Visual elements should support the information rather than simply decorate the document.

GROUP 5

LINKS AND BOOKMARKS

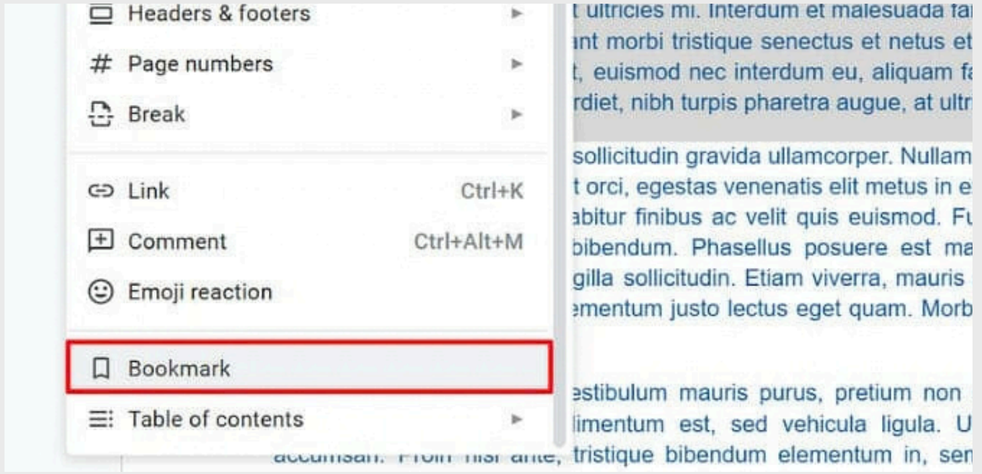

Google Docs allows users to insert hyperlinks to websites, email addresses, and other destinations.

It also supports bookmarks, which allow users to link directly to a particular location inside a document.

This becomes very useful in long documents.

For example:
A project manual could contain:
Click here to go directly to the troubleshooting section.

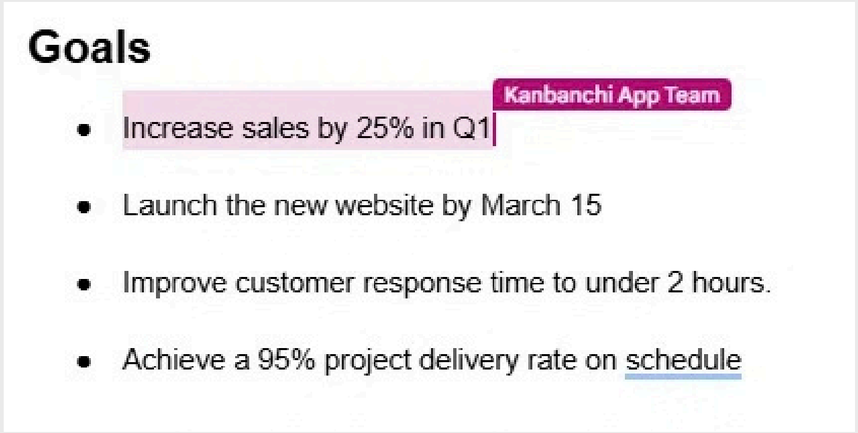

The link can send the reader to a bookmarked section rather than forcing them to scroll through the entire document.

GROUP 5

COLLABORATION

Google Docs allows documents to be shared with other people using different permission levels:

VIEWER

Can view the document.

COMMENTER

Can view and comment and can make suggestions, but does not directly edit the document's content.

EDITOR

Can directly modify the document.

This is arguably the feature that most clearly distinguishes Google Docs from a basic offline document workflow.

GROUP 5

COMMENTS

Comments allow collaborators to discuss specific content without necessarily changing the document itself.

Users can select text and add a comment. Other collaborators can reply to comments and resolve them when the discussion is finished.

Why Comments are Useful
Comments separate:
the document's content from the discussion about the content

This makes group work cleaner and more organized.

GROUP 5

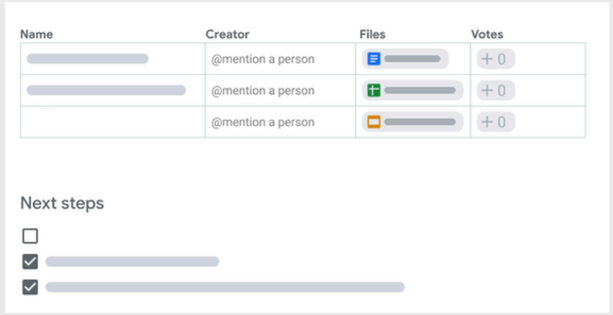

ACTION ITEMS

Comments can also be used as action items.

For eligible work or school accounts, a collaborator can be assigned a task through a comment, and the assigned person receives an email notification.

Example:
“@Maria, please verify the references.”

This converts a general discussion into a specific responsibility.

Practical value

This is particularly useful for:

- Group projects
- Business projects
- Meeting follow-ups
- Task assignment
- Document review

GROUP 5

SUGGESTING MODE

Google Docs has a Suggesting mode that lets users propose changes without directly making those changes final.

Suggested additions and deletions appear differently from the document's accepted text, and the document owner can accept or reject each suggestion.

GROUP 5

WHY IS THIS IMPORTANT?

Instead of deleting the original sentence and replacing it permanently, the editor can suggest:
“Consider changing this sentence for clarity.”

The author retains control over whether the change becomes part of the final document.

Suggesting mode is especially appropriate for:

- Peer editing
- Proofreading
- Academic writing
- Editorial work
- Supervisory review
- Draft revisions

GROUP 5

COMMENTS VS SUGGESTIONS VS DIRECT EDITING

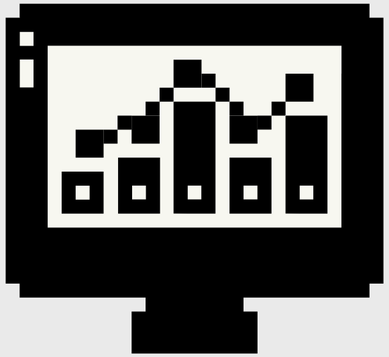

METHOD	PURPOSE
Direct Editing	Make the change immediately.
Comment	Discuss, ask, explain, or assign a task.
Suggestion	Propose a change that another user can accept or reject.

A strong way to remember it:

Edit = change it.
Comment = talk about it.
Suggest = propose changing it.

GROUP 5

VERSION HISTORY

Google Docs supports version history, allowing users with the appropriate access to review previous versions and see who made changes.

VERSION HISTORY SUPPORTS:

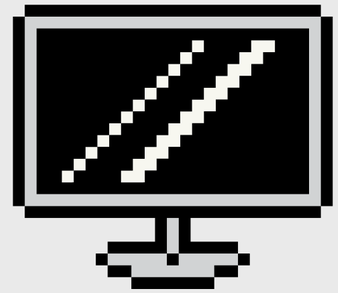

- ACCOUNTABILITY
- REVISION TRACKING
- RECOVERY
- COLLABORATION

GROUP 5

AUTOMATIC SAVING

When working online, Google automatically saves changes as the user types, so there is no traditional Save button required.

This is one of the major differences between a cloud-based editing workflow and the traditional:
Type → Save → Save As → Send attachment
workflow.

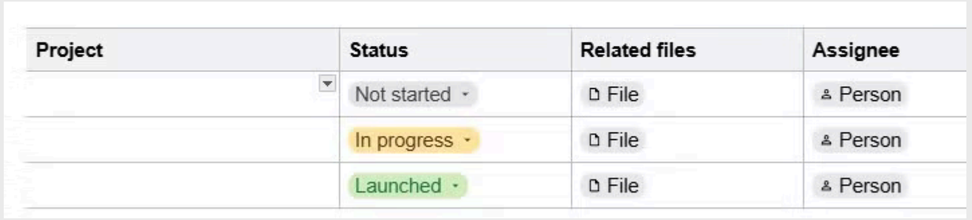

GROUP 5

SMART CHIPS

Smart chips can provide contextual information for things such as:

- People
- Google files
- Dates
- Calendar events
- Places and directions

Project	Status	Related files	Assignee
	Not started	File	Person
	In progress	File	Person
	Launched	File	Person

Google Docs also supports other chip-based features such as placeholders, dropdowns, and time trackers.

A simple way to activate many of these features is to type: @

Example
Typing:
@Maria
can create a people-related smart chip.

GROUP 5

BUILDING BLOCKS

Google Docs currently provides building blocks designed to help users quickly create structured content for purposes such as:

- Project management
- Communication
- Meetings

Project Component	Description	Status	Suggested Due Date
Determine topic		Approved	May 14, 2023
Find 3 resources to support your topic		In progress	May 18, 2023
Summarize findings		Not started	May 22, 2023
Create Rough Draft		Need help!	May 24, 2023

This supports the principle:
Use templates and reusable structures when the goal is efficiency and consistency.

Examples include meeting notes and other reusable structures.
The @ menu can also be used to locate building blocks.

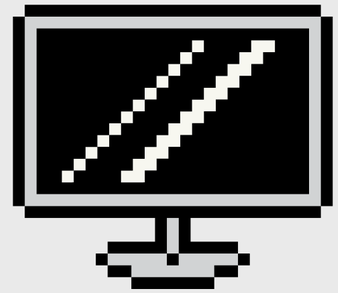

GROUP 5

DROPDOWNS AND STRUCTURED INFORMATION

Google Docs can also use dropdown chips to display multiple status options.

For Example
Status:

- Not Started
- In Progress
- For Review
- Completed

GROUP 5

CITATIONS AND BIBLIOGRAPHY

For academic work, one of the most useful features is the Citations tool.

Google Docs currently supports citation styles including:

- MLA 8th edition
- APA 7th edition
- Chicago Author-Date 17th edition

The citation tool is accessed through:
Tools → Citations

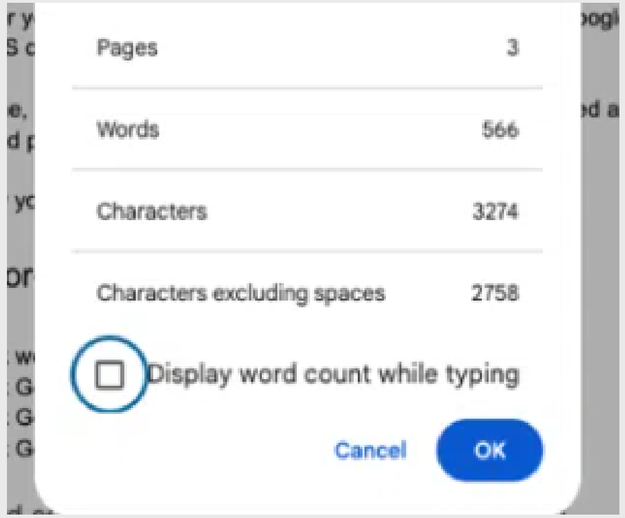

Why this matters to students
Instead of manually typing every citation, users can store source information and use Google's citation workflow.

This is especially useful for:

- Research papers
- Literature reviews
- Reports
- Essays
- Academic projects

GROUP 5

WORD COUNT

Google Docs includes a word-count function that can display:

- Pages
- Words
- Characters
- Characters without spaces

The user can also choose to display the count while typing.

Practical example
If an instructor says:
"Submit a 1,500-word essay."

The student can monitor progress directly in Google Docs rather than estimating manually.

GROUP 5

SPELLING AND GRAMMAR CHECKING

Spelling, grammar suggestions available.

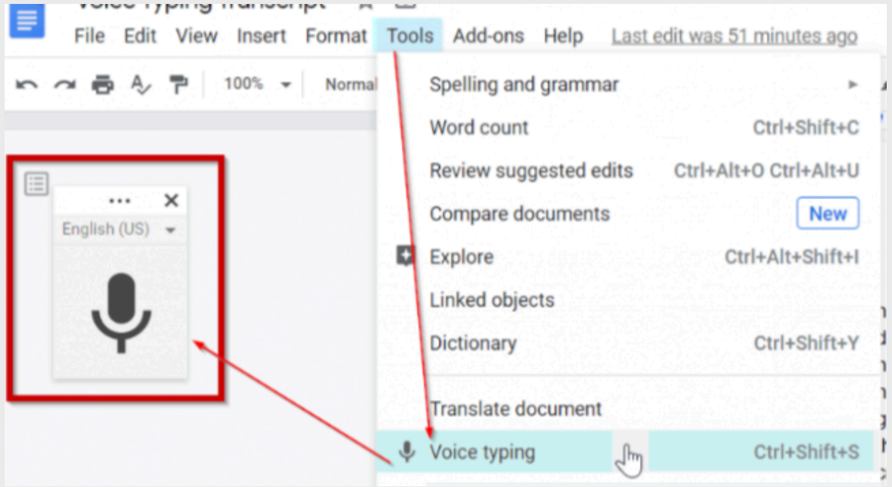

IMPORTANT PRINCIPLE
The feature is an aid—not a substitute for proofreading.

A grammatically acceptable sentence can still contain:

- Incorrect facts
- Poor reasoning
- Wrong terminology
- Misleading statements
- Improper citations

GROUP 5

VOICE TYPING

Google Docs also supports voice typing, allowing users to dictate text using a microphone.

Google currently documents support in recent versions of Chrome, Edge, and Safari, although availability can depend on organizational settings.

Practical Applications

Voice typing can help when:

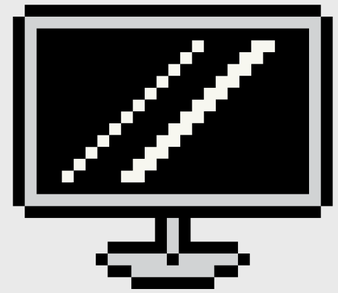

- Drafting ideas quickly
- Taking notes
- Supporting accessibility
- Creating spoken drafts
- Reducing repetitive typing

GROUP 5

COMPATIBILITY WITH MICROSOFT OFFICE FILES

Google Docs can also work with Microsoft Office files in Google Drive.

Users can upload Office files and work with them through Google Docs, Sheets, or Slides, or convert them to Google formats. This matters because modern workplaces often contain files created by different software ecosystems.

GROUP 5

EXPORTING AND DOWNLOADING DOCUMENTS

A Google Doc can be downloaded into other file formats through:
File → Download

Google's documentation confirms downloading documents in different formats and also provides PDF-saving options through printing.

This separates the woking format from the submission format.

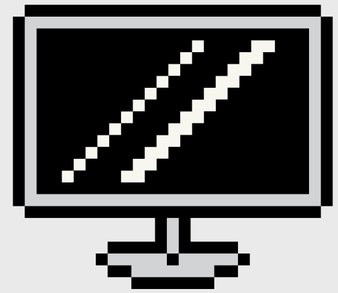

GROUP 5

PRIVACY AND SHARING

Do not confuse “having a link” with “having the correct permission.”

Google Docs sharing can use: Restricted, Anyone with the link, with roles such as:
Viewer / Commenter / Editor

For schoolwork, the safest general approach is to give people only the access they actually need.

GROUP 5

AI AND GEMINI IN GOOGLE DOCS

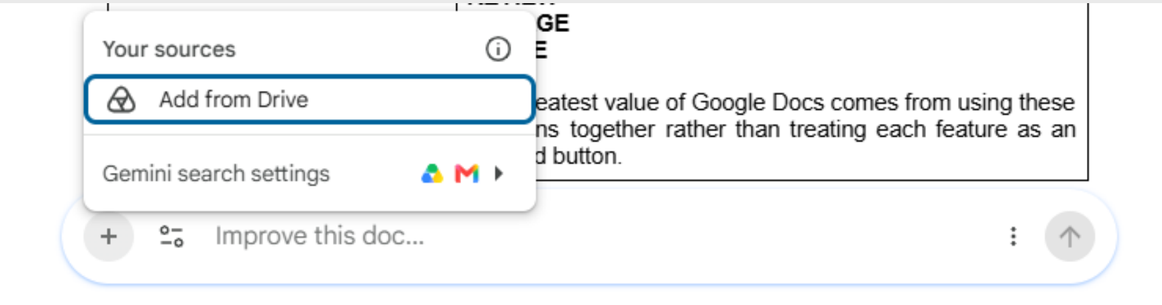

An important current development is the integration of Gemini into Google Docs

Google describes Gemini in Docs as an AI assistant that can help with tasks such as drafting content, improving writing, summarizing information, and related document tasks.

These capabilities require an eligible Google Workspace or Google AI plan, so availability is not identical for every account.

GROUP 5

AI AND GEMINI IN GOOGLE DOCS

Responsible use of AI
AI should be treated as an assistance tool, not an automatic source of truth.

A good workflow is:
AI suggestion → human review → fact checking → editing → final decision

GROUP 5

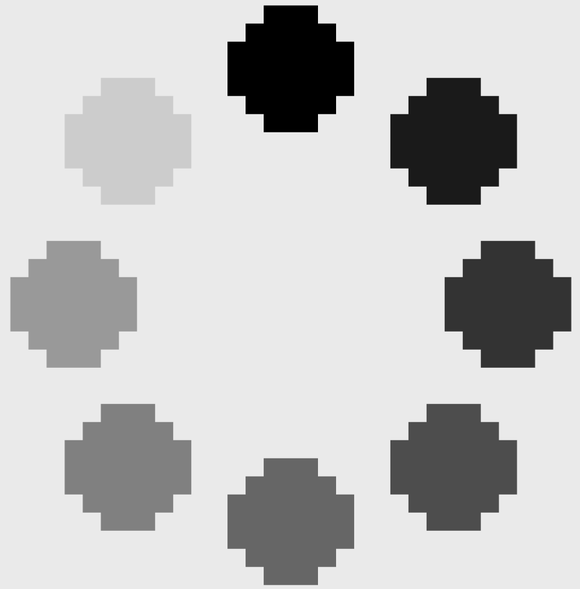

KEY TAKEAWAY

Google Docs combines traditional word-processing functions with modern cloud-based collaboration.

The greatest value of Google Docs comes from using these functions together rather than treating each feature as an isolated button.

GROUP 5

DEMONSTRATION

Please focus your attention on the demonstration.
